Summary

Final year B.Tech. CSE student experienced in **LLM** integration, **RAG** pipelines, and **Generative AI** development using Sentence Transformers, **FAISS**, and Phi-3. Backed by **full-stack** skills in React.js, Node.js, and **FastAPI** for end-to-end deployment, with **600+** **DSA** problems solved on LeetCode (**Rating: 1642**).

Education

B.Tech. – Computer Science & Engineering	2023–2027
<i>G.L. Bajaj Institute of Technology and Management, AKTU</i>	CGPA: 8.7
Senior Secondary (Class XII)	May 2023
<i>Priyanka Modern School, Dhampur (Bijnor)</i>	CBSE 92.8%

Projects

Offline-CortexDoc	Github
- Built a privacy-focused offline RAG system to query unstructured documents locally with zero external API cost, implementing chunking, embeddings, vectorDB (FAISS) and semantic based retrieval for efficient search. - Integrated Phi-3 LLM for context-aware query responses over 1,000+ document chunks; automated full environment setup via shell scripting, reducing deployment time to under 2 minutes.	
Signalist - Stock Tracker	Website Github
- Deployed a full-stack stock tracking web app using React.js, Node.js, and MongoDB with secure authentication, personalized watchlists, and real-time market insights via interactive heatmaps across 10+ sectors. - Developed backend services and REST APIs with Inngest-powered background job processing, enabling efficient real-time updates and improved application performance.	
GenixAi	Website Github
- Developed an AI-powered content generation platform integrating multiple LLM (Gemini) for text generation, image creation, and (OpenAI) for resume analysis via a clean REST API layer built on Node.js and Express.js. - Architected backend with PostgreSQL (Neon serverless) for persistent storage, implemented secure file upload handling, and validated all API endpoints using Postman for production reliability.	

Key Skills

AI /ML : RAG, LLMs Integration, Generative AI, Prompt Engineering, LangChain, prompt Engineering, multi-agent system.
Languages & Core : Python, JavaScript, Java | Data Structures & Algorithms, OOP, DBMS, Distributed Systems.
Development : HTML, Tailwind CSS, React.js, Node.js, Express.js, REST APIs, FastAPI.
Databases: MongoDB, MySQL, PostgresSQL, VectorDB.
Devops & Cloud: GitHub, Postman, Vercel, Docker, Linux, Hugging Face, CI/CD pipeline, AWS Bedrock.

Professional Training

Katalyst India , New Delhi
- Selected for a prestigious National Women-in-STEM Leadership Program; completed 100+ advanced technical training modules and received 50+ individualized mentoring sessions from senior industry professionals - Participated in 4+ industry visits (Microsoft, CNH Industrial, etc.) engaged with 20+ industry professionals, observed real-time corporate workflows.

Extra-Curricular Activities

Technical Lead (Yuktikula Club)	July 2024 – Present
- Organized and led technical events including hackathons and workshops with 200+ participants across the department. - Developer of the club's official website, serving as the central platform for event information and club updates.	

Achievements & Certifications

- Selected as one of the top 5 finalists teams nationwide in Code Kshetra 2.0. Katalyst Tech Fest 2026: Secured 3rd place in Delhi Region among 150 participants. Google Cloud Certificate: Develop Gen AI Apps with Gemini and streamlit LeetCode Rating: 1642 600+ problems solved
